PROJECT DEVELOPMENT

- RFID Attendance Monitoring System: The project describes the implementation of Radio Frequency Identity (RFID) technology to design an attendance monitoring system.
- Water Level Detector: The project aim to design a water level detector and indicator system which indicates the changes of water level through the indicator lamps by means of controller circuit built around IC.
- Investigation of Radio Propagation of Path Loss Models in LTE-A System: The project compute path loss for different kind of environment by using Matrix Laboratory (MATLAB) based simulations of four propagation models.
